

TRANSMISSION ENGINEERING FOR EDF GENERATION

CIST (Transmission System Engineering Centre) is EDF's engineering centre, in charge of solving electricity Transmission issues as well as the design and maintenance plans, for new Transmission installation.

CIST is the interface between EDF Generation (nuclear, hydraulic, Thermal, Renewable) and the System Operator.

CIST provides international consultancy services in the following fields :

- Overhead lines, cables, and HV substation
- Dispatch Control Center Transmission and distribution network
- Studies on network development, operational studies, interconnections

A photograph of high-voltage power lines stretching across a clear blue sky. The lines are supported by towers and feature multiple rows of insulators. The perspective is from a low angle, looking up at the towers.

Active in **33** countries

Over **38** foreign customers
