

CAMILLE CLAUDEL, DU BOIS DONT ON SE CHAUFFE !
WOOD FOR HEATING HOMES FOR THE ECO-DISTRICT CAMILLE CLAUDEL

Direction Commerce, EDF

Ce projet positionne EDF comme l'équipementier, l'exploitant et le fournisseur de chaleur (chauffage et eau chaude sanitaire) de l'éco-quartier Camille Claudel (centre aquatique, écoles, commerces) à partir de l'énergie renouvelable biomasse (2000 logements à Palaiseau).

Over a period of five years, this project has created the commercial, legal, technical and administrative conditions among public and private players in Camille Claudel eco-district (local communities, SEM development companies, architects, etc.) which are necessary for EDF to operate a private heating network using renewable energy in the district (2,000 homes in Palaiseau).
