

DUNKERQUE LNG, A TERMINAL UNDER CONSTRUCTION:

- 65% EDF – 25% Fluxys – 10% Total
- the largest LNG terminal in Continental Europe
- an annual regasification capacity of 13 bcm:
8 bcm purchased in long-term by EDF and 2 bcm by Total,
with 3 billion m³ still available for the market later
- a capacity to process 20% of the France and Belgium total
gas demand

The 20-year fully exempted terminal from third party access directly connected to both French and Belgian gas networks: a foundation and anchoring point for supplying the core and liquid north-western European area.

Terminal's industrial and commercial deployment scheduled for the end of 2015
