

BELLE-ÎLE - QUIBERON PROJECT (FRANCE)

EDF assures design, tests, qualification, monitoring of fabrication and installation of the cable by boat.

Technical characteristics :

- 15 km without any joints
- 450 tonnes
- Cable is coilable with double armor
- Optical fiber element containing 48 individual fibers which allows to link the island with high-speed broadband
- Lead-free ; the environment is preserved
- The cable design is such that allows it to be placed on more economic ship, which does not require a rotating tank
