

UNE SOLUTION POUR CHAQUE DÉCHET

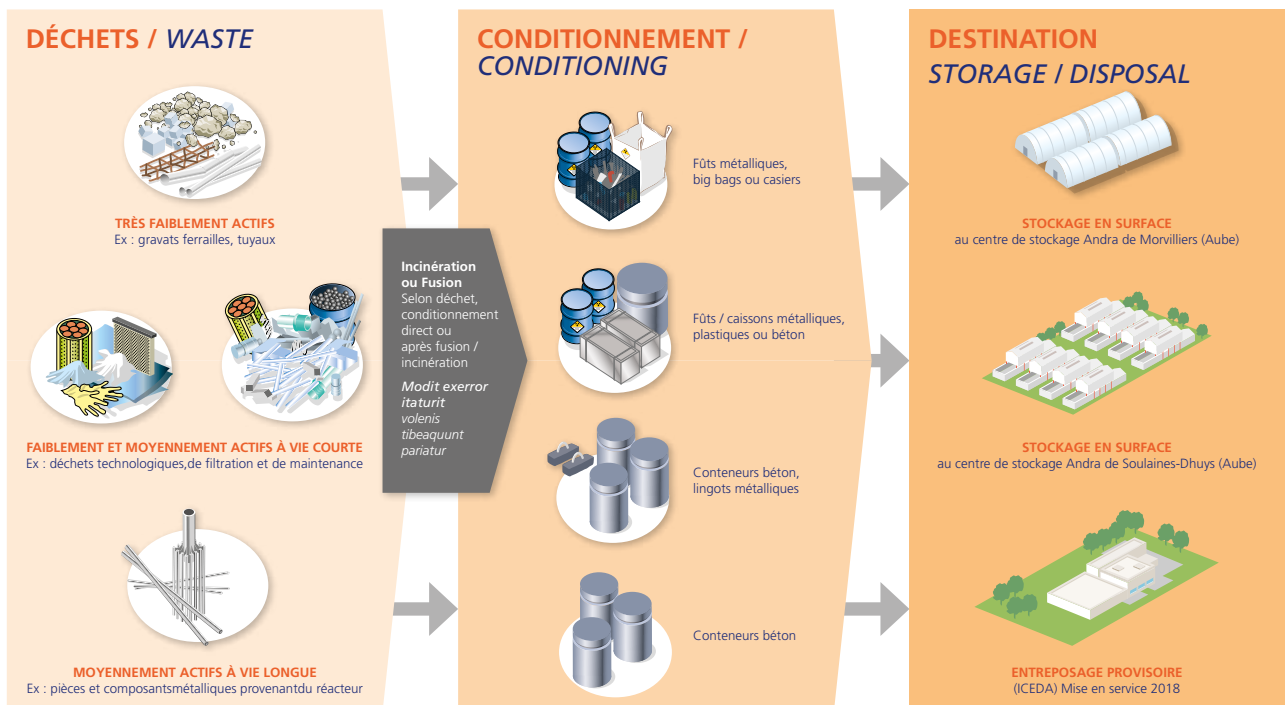

Chaque déchet produit est :

- **Trié** en fonction de sa nature et de son niveau de radioactivité
- **Conditionné** dans un emballage spécifique permettant de l'isoler de l'Homme et de l'environnement.
- **Et transporté** vers un centre de stockage adapté à sa nature (Morvilliers et Soulaïnes dans l'Aube)

A SOLUTION FOR EACH ITEM OF WASTE

Each waste is:

- **sorted** according to type and radioactivity level
- **packaged** in a specific container to keep it isolated from people and the environment
- **and shipped** to the appropriate disposal facility (Morvilliers and Soulaïnes in the Aube, France)

The decommissioning of PWR facilities generates a large amount of waste. This waste has varying levels of radioactivity: very low-level waste, short-lived low or intermediate-level waste, as well as long-lived intermediate-level waste. Depending on type, some of this waste is processed by incineration or melting before being packaged and placed in specific drums. If this operation is not required, the waste is directly packaged and sent to the appropriate disposal facility or alternatively to a storage facility in the case of long-lived waste.

100% des déchets issus de la centrale de Chooz A disposent d'une solution d'entreposage ou de stockage (mise en service de l'installation ICEDA en 2018).

100% of the waste generated by Chooz A have storage and disposal solutions (the ICEDA facility will start operation in 2018).
