

**EDF Fenice** is one of the most important ESCO operating in international landscape, serving the largest industrial groups and major public works thanks also to its presence in the Polish, Spanish and Russian markets.

### Energy efficiency

EDF Fenice is a leader company in providing advice on Energy Efficiency for large industrial and public customers thanks to the know-how gained in the management of its own facilities.

### Cogeneration

EDF Fenice makes engineering projects, builds and operates facilities (from 1 and 100 MW) for the production of electricity, heat and all major energy resources for the industrial sector. Thanks to its facilities it operates and maintains an overall installed capacity of 800 MW electric power and 2,700 MW thermal power.

### Clean energy services for industry

EDF Fenice proposes a full range of production process auxiliary services for industry in the automotive, aeronautic, railway, chemical and agro-food sectors. EDF Fenice guarantees the production and distribution of energy vectors (electricity, hot and superheated water, steam, cooled and refrigerated air, compressed air, industrial and demineralised water, etc.) upstream and downstream of industrial processes.

### Environmental services for industry

EDF Fenice, specialised in furnishing environmental consulting and services, proposes a complete suite of activities ranging from laboratory analyses to reclamation, including analysis of environmental impact on large sites. EDF Fenice owns and operates also an energy-from-waste plant in the South of Italy authorised to treat 65,000 tons/year of industrial and urban waste (yearly cogeneration of 38,000 Mw/h).
