

The EDF group has a stake in the main leading European energy markets: the United Kingdom with EDF Energy, Italy with Edison, and France where EDF is leader in its market. With its mix of nuclear, hydroelectric, fossil-fired and other renewable energies, EDF operates a highly efficient, diversified and comprehensive power generation fleet.

INSTALLED CAPACITY

97.4 GW

in France as at 31 December 2011.

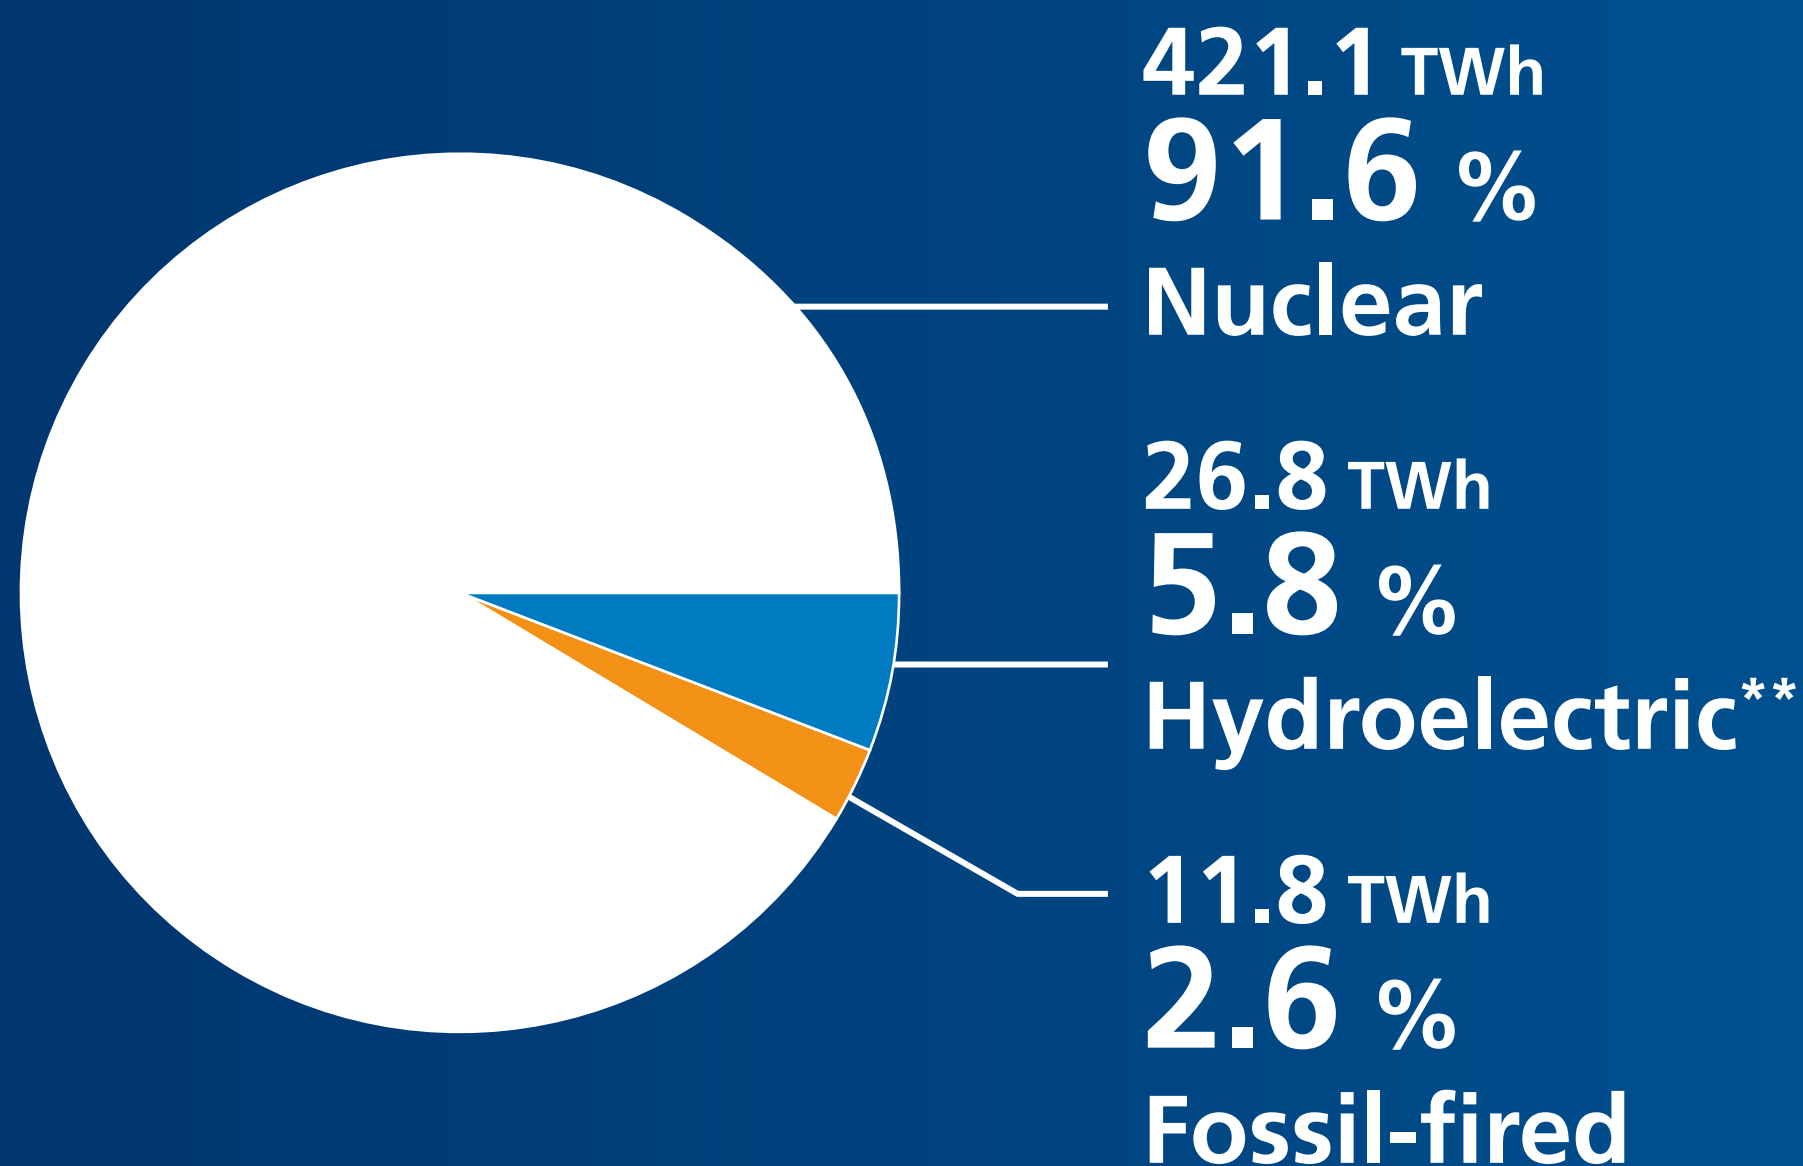

NATIONAL POWER OUTPUT*

459.7 TWh

were generated by EDF in Mainland France in 2011.

EDF, THE WORLDWIDE REFERENCE IN ELECTRICITY

POWER GENERATED BY EDF IN MAINLAND FRANCE, 2011*

* These figures are rounded off to one decimal point as compared with exact values.

** Including power generated by pumped-storage plants.

97.4 %

of the electricity generated by EDF does not emit greenhouse gases.

FRENCH FLEET

19
Nuclear power plants

13
Gas turbines plants

435
Hydroelectric plants

1
Gas combined-cycle plant

22
Fossil-fired plants
